Likely Routes of Exposure: Eyes, skin, inhalation, ingestion

Most Important Symptoms and Effects, Both Acute and Delayed:

May cause eye damage and irritation to skin and respiratory tract. High concentrations or ingestion may cause blurry vision, headache, nausea, CNS depression, digestive tract irritation. Some ingredients separately have shown reproductive, germ cell mutagenicity, developmental, liver and kidney effects in test animals. May damage fertility or the unborn child.

Acute Health Hazard Symptoms:

Eyes: Irritation with potential blurry vision; stinging, swelling, tearing, redness
 Skin: May cause irritation; redness, dermatitis, drying & cracking of skin.
 Ingestion or Inhalation: Irritation of digestive tract, gastric/intestinal disturbance. May cause irritation, blurring of vision, nausea, headache, dizziness, drowsiness, reduced coordination, unconsciousness, central nervous system (CNS) depression, upper respiratory (nose and throat) irritation.

Acute Health Hazards: Skin, eyes and mucous membrane irritant; CNS depressant

Chronic Effects: Prolonged or repeated exposure has been reported to cause liver and kidney damage based on animal test data. Some ingredients separately have shown reproductive, germ cell mutagenicity, developmental, liver and kidney effects in test animals.
