Likely Routes of Exposure: Eyes, skin, inhalation and ingestion

Most Important Symptoms and Effects, Both acute And Delayed:

May cause serious eye irritation, may irritate skin with possible allergic reaction; may irritate airways with overexposure; possible results producing headache, dizziness and other effects on specific organs or body areas as listed below on this page. Harmful if swallowed and enters airways; ingestion would likely cause digestive tract irritation.

Acute Health Hazard Symptoms:

- Eyes: May cause irritation, stinging, tearing, redness, swelling, tissue injury.
- Skin: May cause irritation, drying, burns, defatting, dermatitis, redness, blistering passage, cracking, rash.
- Ingestion and Inhalation: Irritation of digestive tract, gastric and intestinal disturbances, nausea, vomiting, diarrhea. May cause irritation (nose, throat, airways), central nervous system depression, fatigue, coughing, headache, dizziness, weakness, apparent intoxication, drowsiness, unconsciousness.

Acute Health Hazards: Skin, eyes and respiratory irritant; kidney damage; CNS depressant.

Chronic Effects: One or more components have shown damage to the blood-forming system, kidney, liver, spleen, and noted reproductive & developmental effects based on laboratory animal tests.
