Likely Routes Of Exposure: Eyes, skin, inhalation and ingestion

Most Important Symptoms And Effects, Both Acute And Delayed:

May cause serious eye damage, may irritate skin, may irritate airways with overexposure; possible results producing headache, dizziness, dermatitis, blurry vision and other effects on specific organs or body areas as listed on the next page. Harmful if swallowed; ingestion would likely cause digestive tract irritation. Liver and kidney damage, reproductive, germ cell mutagenicity and developmental effects were reported in test animals for some ingredients.

Acute Health Hazard Symptoms:

Eyes: Irritation with potential blurry vision; stinging, swelling, tearing, redness; grit in eye can cause abrasive damage.  
 Skin: May cause irritation; redness, dermatitis, drying & cracking of skin.  
 Ingestion and Inhalation: Irritation of digestive tract, gastric/intestinal disturbances. May cause irritation, blurring of vision, nausea, headache, dizziness, drowsiness, reduced coordination, unconsciousness, central nervous system (CNS) depression, upper respiratory (nose and throat) irritation.

Acute Health Hazards: Skin, eyes and mucous membrane irritant; CNS depressant.

Chronic Effects: Prolonged or repeated exposure has been reported to cause liver and kidney damage based on animal test data. Other ingredients have shown reproductive, germ cell mutagenicity and developmental effects in laboratory test animals.
